CALLME Teaching – Press Release

The Faculty of Engineering, University of Kragujevac, organized the third teaching session within the framework of the CALLME educational initiative, utilizing the contemporary web-based platform developed as part of the project. This session employed a novel pedagogical methodology that integrates STE(A)M principles into the field of biomedical engineering education.

The teaching session was conducted at the Faculty of Engineering Sciences and involved final year undergraduate students from the Department of Computer Engineering and Software Engineering. Through participation in this session, students were introduced to practical examples demonstrating the application of engineering methods, techniques, and tools in biomedical contexts, thereby gaining insight into the interdisciplinary nature and scope of biomedical engineering.
