CALLME Training – Press Release (November 2024)

The Faculty of Engineering at the University of Kragujevac organized the second training session for utilizing the contemporary CALLME educational web platform. This platform is based on a novel educational methodology, integrating STE(A)M (Science, Technology, Engineering, Arts, and Mathematics) principles into biomedical engineering education. The training aimed to familiarize participants with the platform's features and demonstrate how it supports advanced learning in biomedical engineering.

The training covered the following key topics:

- Introduction to the CALLME Project Goals: Overview of the project's objectives and its impact on the development of biomedical engineering education.
- Demonstration of Web Platform Content: Presentation of the various resources, tools, and materials available on the platform.
- Exploration of Courses on the Platform: A detailed walkthrough of the courses offered through the platform, showcasing the integration of STE(A)M principles into the curriculum.
- Usage of E-Centers: Practical guidance on how to access and use e-centers, which are designed to support online learning and collaboration.

- Discussion: Interactive session allowing attendees to ask questions, share thoughts, and discuss the potential applications of the platform in their academic and professional development.

The training session was attended by a group of students interested in specializing in biomedical engineering, offering them a unique opportunity to engage with cutting-edge educational resources and gain insights into the interdisciplinary nature of the field.
